## Appetizers

### Discover rsync

*rsync is often a better choice than scp.  Write an rsync command to backup a directory to a remote server.*

2

### Track /etc
*Create a GIT repo for /etc then write a cron job to commit changes once a day.*

1

## Mains

### Log Server

4

*Build a remote log server and configure Kickstart so that every new server built sends authpriv messages to it.*

### White Hat

5

*Your instructor will supply a Unix VM, on which Alice has an account.  Determine Alice's password.*

## Desert

### Catch of the day

*market price*

*Got a cool project Unix project?  The better it is, the more you earn.*

*Max 5 bonus marks per student*
