

Worksheet 1

This worksheet is all about discovering the Java output capabilities of **System.out.print()**

Task: Create a Java program which draws any ONE of the three figures shown below. Make your drawing as close as possible to the figure you choose. Use the **System.out.print()** statement, to achieve your success.

The following is a list of *escape codes* which might come in handy.

System.out.println; System.out.print("\n");	advances the cursor to the next line
System.out.print("\\");	displays the \ character (you're going to need the backslash for figs 2 or 3)
System.out.print("\t");	generates a tab

Make your program output EXACTLY as shown in the sample session below:

Sample Session

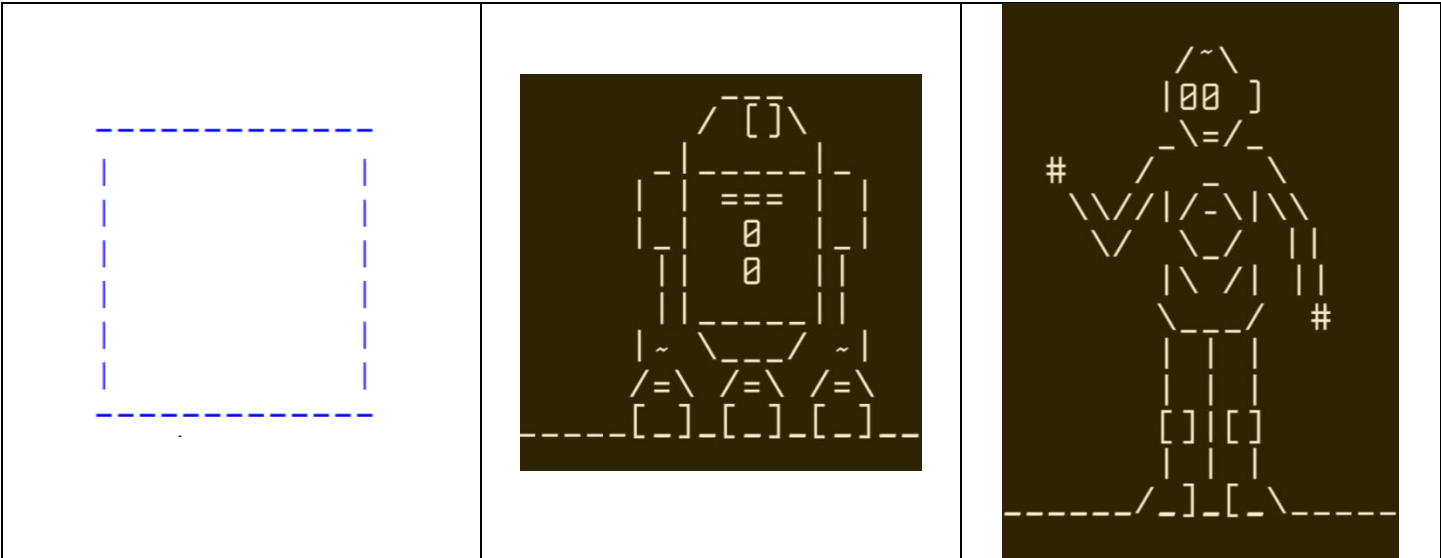

Figure 1. a 13 x 6 box

Figure 2. R2 from Star Wars

Figure 3. D2 from Star Wars
