

Worksheet 16

Switch Statement

Create a static method called, *getMonthName(int monthNum)* which returns the month name in script corresponding to the *monthNum* provided.

For example:

```
System.out.println( getMonthName(9) );
```

would display, **September**

Use a switch statement in Java to accomplish within your *getMonthName* method. If you need a hint on how to do this, review Video 42 on the Switch statement.

Sample Session

```
Enter a month number (e.g. 9 for Sept) > 3
3 corresponds to March
the month before is February
the month after is April
```

```
Enter a month number (e.g. 9 for Sept) > 12
12 corresponds to December
the month before is November
the month after is January
```
